-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on ____.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 38,39 and 46-50 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) Claim(s) ____ is/are allowed.
- 6) Claim(s) 38,39 and 46-50 is/are rejected.
- 7) Claim(s) ____ is/are objected to.
- 8) Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on ____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. ____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) <input checked="" type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413)
2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)	Paper No(s)/Mail Date. ____ .
3) <input checked="" type="checkbox"/> Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) Paper No(s)/Mail Date <u>11/8/04</u> .	5) <input type="checkbox"/> Notice of Informal Patent Application (PTO-152)
	6) <input type="checkbox"/> Other: ____ .

DETAILED ACTION

Applicant's amendment dated 11/8/04 is hereby acknowledged.

Status of the Claims

Claims 38-39 and 46-50 are currently pending and under consideration..

Claims 40-45 have been cancelled.

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Withdrawn Objection (s) and/or Rejection (s)

In light of applicant's amendment, the rejection of claims 38-44 and 46-47 under 35 U.S.C. 103(a) as being unpatentable over Baker et al. '937, Friedel et al. and/or Eversmeyer et al. references applied to claims 38-44 and 46-47 above, and further in view of Mayer et al. US Pat. No. 5834,479 (11/98) is hereby withdrawn.

Outstanding Objection(s) and/or Rejection (s)

1. Claims 38-39, 46-48 and 50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baker et al. US Pat. No. 4,569,937 (2/86), Friedel et al. Drugs Vol. 45(1): pages 131-156 1993) and/or Eversmeyer et al. American Journal of Medicine (Aug. 9, 1993) Vol. 95(suppl 2A) pages 10S-18S.

Baker et al. teach pharmaceutical compositions for relieving pain in humans or mammals (e.g. mice, rats etc.) comprising a combination of :

- a. a narcotic analgesic (preferably oxycodone: see formulations col. 4-8; mice data in col. 8-10; patent claims), or a pharmaceutically acceptable salt thereof; and

b. ibuprofen (a non-steroidal anti-inflammatory drug or NSAID: see col. 1-2), or a pharmaceutically acceptable suitable salt thereof, in a weight ratio of about 1:800 (e.g. .001:1) to 1:1 (compare to present claim 47: See col. 2) with oxycodone amounts of about 5 mgs-600mgs (compare to present claim 46).

The Baker reference teaches oral administration (e.g. see present claim 39), which can be coadministered in a single dosage form (e.g. see col. 3-8) or sequentially administered (e.g. see i.e. col. 8-9; mice are dosed sequentially...). The oral dosage forms include "sustained release" formulations (e.g. tablets, capsules, etc: see col. 3-4, especially col. 4). The Baker et al. reference teach that dose ratios can be adjusted and that the analgesic activity of the combined oxycodone and ibuprofen activity is unexpectedly enhanced or synergistic i.e. the resulting activity is greater than the activity expected from the sum of the activities of the individual components, thereby permitting reduced dosages of narcotic analgesics (e.g. oxycodone) AND which diminishes adverse side effects (e.g. addiction) and toxicity which would result from the otherwise required amounts of the individual drug components resulting from high dosages of oxycodone or NSAID's such as ibuprofen. See e.g. col. 1-2; col. 3, lines 19-32). Accordingly, Baker would teach the use of therapeutic and subtherapeutic amounts of oxycodone and/or ibuprofen in view of the synergistic nature of the combinations and the desire to reduce the toxicity and/or side-effects of both agents; and as required by the doctor for his/her particular patient., including dosage optimization e.g. dosage overlapping of active ingredients. See e.g. col. 3 where dosage is modified to suit the particular patient.

The Baker analgesic composition differs from that presently claimed in that it fails to teach the substitution of nabumetone for ibuprofen into the Baker compositions.

Friedel et al. teach that nabumetone possesses the typical pharmacodynamic properties of the nonsteroidal class of anti-inflammatory (NSAID) drugs including intrinsic analgesic and antipyretic activity being demonstrated in animal studies and in humans with the following advantages over other NSAIDS:

- a. does not exert a significant direct toxic effect on the gastric mucosa during absorption;
- b. in studies, produced a lower incidence of gastrointestinal erosions or microbleeding than aspirin, naproxen, piroxicam and ibuprofen; and
- c. more recently clinical data further confirmed the efficacy and tolerability of nabumetone ; "Thus, the drug (e.g. nabumetone) should now be considered a well established member of this group of agents (e.g. NSAIDS) for the treatment of painful rheumatic and inflammatory conditions". See e.g. Abstract, pages 132-133 as well as the remainder of Friedel.

Similarly, Eversmeyer et al. teaches that nabumetone is equally efficacious in the treatment of arthritic pain patients (e.g. osteo/rheumatoid arthritis) but has shown to be more safe, with reduced side-effects (e.g. dyspepsia, ulcers, reduced hemoglobin, gastritis etc.). See Eversmeyer et al. Abstract and disclosed studies.

Accordingly, one of ordinary skill in the art would have been motivated to substitute nabumetone (a NSAID) for ibuprofen (a different NSAID) in the Baker reference compositions in light of the Friedel and/or Eversmeyer reference teachings

that nabumetone is equally efficacious, but is safer with less side effects (e.g. as compared to ibuprofen).

Additionally, it is noted that the instant situation is amenable to the type of analysis set forth in *In re Kerkhoven*, 205 USPQ 1069 (CCPA 1980) wherein the court held that it is *prima facie* obvious to combine two (or more) compositions each of which is taught by the prior art to be useful for the same purpose

Thus, it would have been *prima facie* obvious to one of ordinary skill in the art at the time of applicant's invention to modify the Baker reference analgesic composition by substituting the NSAID nabumetone for the NSAID ibuprofen in light of the benefits of nabumetone (increased safety/decreased side effect as compared to ibuprofen) as taught by the Friedel and/or Eversmeyer reference references.

New Objection (s) and/or Rejection (s)

2. Claim 49 is rejected under 35 U.S.C. 103(a) as being unpatentable over Baker et al. '937 and Friedel et al. Drugs Vol. 45(1): pages 131-156 1993) and/or Eversmeyer et al. as applied to claims 38-39, 46-48 and 50 above, and further in view of Oshlack et al. US Pat. No. 5,472,712 (12/95) or Oshlack et al. US Pat. No. 6,294,195 (9/01: effectively filed 10/93 or earlier).

The substance of the above obviousness rejection is hereby incorporated by reference in its entirety.

Although the Baker reference teaches oral dosage forms which include "sustained release" formulations (e.g. tablets, capsules, etc: see col. 3-4, especially col. 4) utilizing "sustained release carriers", the Baker reference fails to explicitly teach "a

sustained release carrier which provides a sustained release of the oxcodone and/or ... salt thereof".

However, the use of sustained release dosage forms for opioid analgesics, including oxycodone which utilize sustained release carriers employing beads which are coated with the opioid drug or which include substrate layers which include the drugs is known in the art to effectuate delayed release of extended duration. E.g. see Oslack et al. and Oshlack patent references.

Accordingly, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to utilize sustained release carriers for oxycodone including beads/layers as taught by the Oshlack and Oshlack et al. patents for use in the Baker compositions since Baker specifically teaches using "sustained release formulations" and further in view of the advantages of utilizing the Oshlack patent sustained release carriers including delayed drug release of extended duration.

Discussion

Applicant's arguments directed to the above obviousness rejections were considered but deemed nonpersuasive for the following reasons.

Initially, it is noted in response to applicant's argument, the above rejections were modified to remove a "consisting essentially of" embodiment that included three analgesics (e.g. celebrex, oxycodone and ibuprofen). It is further noted that the above rejection was further modified in response to applicant's amendment (e.g. canceling claims and adding new claims addressing delayed release).

Applicant argues:

Art Unit: 1639

1. "... that the purported invention of Baker et al. is directed to pharmaceutical compositions of narcotic analgesics and ibuprofen which '... exhibit unexpectedly enhanced analgesic activity ...' (emphasis provided by applicant); AND
2. that "Baker et al. is limited to combinations wherein the NSAID is ibuprofen and does not teach or suggest that the purported 'unexpectedly enhanced analgesic activity would occur with an NSAID which is different than ibuprofen.'"
3. Therefore "substituting ibuprofen with celecoxib would result in a dosage form which is not directed to the principle of operation described in Baker et al. (i.e. the purported synergism of narcotic analgesics and ibuprofen); and
4. Changing "the principle of operation of the prior art invention" is indicia of nonobviousness citing MPEP 8th edition, Revision 2, p. 2100-132.

This argument was considered, but deemed nonpersuasive for the following reasons.

Initially, it is noted that three (3) basic criteria must be met in order to establish a *prima facie* case of obviousness:

1. There must be some suggestion or motivation, either in the reference themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or combine reference teachings;
2. There must be a reasonable expectation of success; and
3. The prior art reference (or references when combined) must teach or suggest all the claim limitations. See MPEP 2143 "Basic Requirements of a Prima Facie Case of Obviousness" (pages 2100-129: revised 2 May 2004).

However regarding criteria. 1. above (e.g. "suggestion or motivation" to combine) "If the proposed modification or combination of the prior art would change the principle of operation of the prior art invention being modified, then the teachings of the references are not sufficient to render the claims *prima facie* obvious." See MPEP 2143.02 page 2100-132 citing *In re Ratti*, 270 F. 2d 810, 123 USPQ 349 (CCPA 1959). *In re Ratti* was directed to a claim drawn to "an oil seal comprising a bore engaging portion with outwardly biased **resilient** spring fingers inserted in a **resilient** sealing member". The court held that a secondary reference requiring a complete redesign of the primary reference oil seal from one which **required rigidity** to one which was **resilient** was not combinable (emphasis provided).

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In the present case, the above rejection provides ample motivation to combine the references *inter alia* the substitution of one non-narcotic NSAID for another, especially where the secondary reference suggests benefits imparted by making the substitution as outlined in the rejection above.

Additionally, as pointed out in the above rejection, it is noted that the instant situation is amenable to the type of analysis set forth in *In re Kerkhoven*, 205 USPQ 1069 (CCPA 1980) wherein the court held that it is *prima facie* obvious to combine two (or more) compositions each of which is taught by the prior art to be useful for the same purpose

The Examiner disagrees with applicant's position that one of ordinary skill in the art would narrowly construe the Baker reference to be limited to teaching the combination of a single NSAID (e.g. ibuprofen) with a single opioid (e.g. oxycodone) for treating pain. In this regard applicant fails to provide support for this assumption; nor can support be found in either the Baker or Penning references. In fact, both references point to a broad class of NSAID's which function to treat inflammatory pain which include the traditional NSAID's (e.g. aspirin) and the more recently improved NSAID's including ibuprofen and the newer COX-2 inhibitors.

Additionally, applicant's definition of the "principle of operation" of the Baker reference teaching is misguided. The "principle of operation" of the Baker reference is to combine NSAID's (e.g. ibuprofen) with opioids (e.g. oxycodone) in order to achieve improved pain relief as compared to the separate administration of the active agents. The unexpected benefit of achieving greater than additive pain relief (e.g. synergism) represents a strong teaching toward formulating additional compositions which include different (functionally equivalent) NSAID's, especially those with fewer side-effects as compared to traditional NSAID's as pointed out in the secondary reference.

Finally, substituting one functionally equivalent compound for another (e.g. non-opioid NSAID's ie. Cox inhibitors) to treat inflammatory pain is directly in line with sound scientific reasoning and established case law including *In re Kerkhoven* cited above. The *In re Ratti* court's holding of non-combinable references where modifying primary reference *rigid parts of a device to obtain the claimed device which required resilient parts*; tantamount to a complete redesign, is simply not on point.

Accordingly, the above obviousness rejections are hereby maintained.

Relevant Prior Art Reference (s)

1 and 2. Engelhardt et al. Inflamm. Res. Vol. 44: pages 423-33 (1995) and Engelhardt, Brit. J. of Rheum. Vol. 35 (suppl.1) (1996) pages 4-12 teach the beneficial effects of new COX-2 NSAID's (e.g. meloxicam) as compared to the already established aspirin-like NSAID's .

3. Richardson et al. Drug Safety Vol. 15(4)(Oct. 1996) pages 249-260 teach the benefits of selective COX-2 inhibitors, including IBUPROFEN and MELOXICAM and 6-MNA as compared to traditional non-steroidal anti-inflammatory drugs (e.g. NSAID's such as aspirin). See e.g. abstract; pages 253-255

Note: the Oshlack patent references cited in the new obviousness rejection above were raised in response to the new claims (particularly new claims 49) presented in the 10/29/04 amendment addressing sustained release formulations.

Conclusion

1. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Future Correspondences

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bennett Celsa whose telephone number is 571-272-0807. The examiner can normally be reached on 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Wang can be reached on 571-272-0811. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
